

Early Intervention

Early Intervention is a transition to school program for preschool children aged 3-6 years with a diagnosed disability. We have children with many disabilities, such as Autism, Down Syndrome, Global Developmental Delay, Language and Sensory issues.

Our service supports children and their families from all over the Peninsula and Central Coast. We work together to plan for an effective transition to school. As a child's early years are a time of rapid development, it is important to maximise their educational and social outcomes at this time.

The Early Intervention Program promotes an active partnership between families, early intervention services, support agencies and future schools.
